## PROFESSIONAL SUMMARY

Software Development Engineer with 4+ years of experience building cloud-native applications on GCP, Python, and BigQuery, with a strong focus on Data Engineering and AI-enabled solutions. MS in CS graduate passionate about data pipelines, emerging GenAI technologies, and modern UI architecture. Experienced designing REST APIs, supporting MLOps workflows, and shipping AIML/GenAI prototypes across Agile delivery teams.

## EDUCATION

### California State University, Channel Islands

Master of Science, *Computer Science*

Jan 2025 - May 2026

GPA: 3.7/4

### Gujarat Technological University

Bachelor of Engineering, *Computer Engineering*

Aug 2019 - Jul 2023

GPA: 8.38/10

## SKILLS

**Programming Languages:** TypeScript, JavaScript, Python, Java, C++, SQL, C#, Dart

**Frameworks & Libraries:** React.js, Next.js 15, Angular, Redux Toolkit, React Native, Expo, Flutter, Material UI, Python/FastAPI, Django REST Framework, Express.js, Docker, LangChain, LlamaIndex

**Databases:** PostgreSQL, MongoDB, Elasticsearch, Oracle 19c, SQLite, BigQuery, SQL

**Tools & Software:** REST APIs, Microservices, LLM Integration, Git, CI/CD, Agile/Scrum, System Design, Electron Desktop, Node.js Edge Worker, GCP WSS Relay, NSSM, Google Sheets, WebSockets, Docker, Prompt Engineering, RAG fundamentals, MLOps, GenAI, OpenAI API, Gemini API

**Cloud Platforms:** AWS (SQS, S3, Bedrock), GCP (Cloud Storage, Pub/Sub, Dataflow, Vertex AI), BigQuery, Cloud Storage, AWS Bedrock

## WORK EXPERIENCE

### Allyvia | Founding Software Engineer

Jul 2025 - Apr 2026

- Architected a cloud-native, full-stack SaaS platform on GCP using Python, React 19, TypeScript, and Django REST Framework.
- Engineered BigQuery-based analytics and data processing pipelines that sync QuickBooks accounting data, applying Data Engineering patterns such as incremental loads and Python-based transformations to keep API response latency under 200ms.
- Built secure multi-tenant workflows including PIN-authorized kiosk clock-in/out consoles, RBAC route guarding, and token refresh cycles, as part of design, development, testing, and production support.
- Developed AI-enabled REST APIs and integrations, using GCP Cloud Storage and Pub/Sub for event-driven ingestion in an emerging GenAI prototype assistant.

### AIVID.AI | Software Engineer

Jan 2023 - Jun 2025

- Built the multi-site operations portal in Angular and engineered custom Kibana React/Redux plugins to visualize billions of computer vision events across 45+ dashboards for 200+ enterprise sites, applying Basic Machine Learning concepts to event classification.
- Improved Elasticsearch query performance by approximately 25% through structural index mapping, aggregation tuning, and database query optimizations using SQL and Python.
- Developed a C#.NET Windows application to deploy and manage background services (NSSM) for on-premise ONVIF/RTSP stream forwarding with multi-ISP failover (99% uptime), containerized with Docker for reliable delivery.
- Engineered an automated Node.js cron scheduler for scheduled report generation, email alert delivery, and Google Sheets data injections, integrated with Git-based CI/CD pipelines.

### InfoLabz IT Services Pvt. Ltd. | Frontend Software Engineer

Jan 2022 - Dec 2022

- Developed scalable, responsive web applications utilizing modern web standards including HTML5, CSS3, JavaScript, and React.js.
- Improved application performance through reusable component architecture and streamlined state management with Redux, participating in Agile sprint ceremonies with cross-functional teams.
- Worked closely with cross-functional teams and designers to integrate RESTful APIs, resolve UI defects, and maintain production environments through Git, CI/CD, and Docker-based delivery.

## PROJECTS

### StoreDesk: Local-First Retail Command Center & POS Ecosystem

- Architected a 5-module local-first ecosystem (Electron Desktop, Node.js Edge Worker, GCP WSS Relay, Flutter Scanner, Next.js 15 Web). Integrated Verifone Commander NAXML protocol to auto-seed 10,000+ PLUs, computing MD5 delta hashes to minimize network overhead and executing sub-100ms mobile price checks.

### Card Vault: Cross-Platform Mobile OCR Scanner

- Built a cross-platform mobile client in React Native (Expo) with file-based routing via Expo Router[cite: 1], engineering a base64 image capture pipeline to a Node.js backend executing OCR and regex NLP to parse structured contact details automatically.

### AWS Bedrock Shipping & Logistics Agent

- Developed a smart logistics application integrating AWS Bedrock Agents and ShipStation REST APIs for conversational quote generation and label printing, prototyping a Generative AI (GenAI) assistant using Prompt Engineering and RAG fundamentals.

## CERTIFICATIONS & ACHIEVEMENTS

- AI Mastery Certificate - Cal Poly Digital Transformation Hub

Jan 2025

- Meta Front-End Developer Professional Certificate - Meta

Jan 2024
